

Fitting Instructions for vehicle graphics kits

Tools required:

Sharp knife or scalpel
Squeegee
Bowl of soapy water

Please read carefully the following terms and conditions BEFORE using this product.

Ensure panels are clean, (free from dust, wax, oil etc), avoid working in extremely hot or cold temperatures. (If you are applying your graphic outside, make sure you have someone at hand in case the wind picks up and causes damage to you graphic. The graphics need to be fitted using soapy water, you don't need a lot of washing up liquid in your water, just enough to cause bubbles This will help you position your graphic, and enable your graphic to float into position, Too much washing up liquid will cause your adhesive not to stick properly.

Larger graphics may also need two people to work together.

Carefully remove your graphics kit from its backing film, placing your image face down on a flat clean surface. Remove the backing film (silicon release paper) from the graphic, making sure that all the vinyl kit stays in layout position. Avoid finger marks on the vinyl itself. Wet your adhesive side of the graphic with your soapy water and also the area of the vehicle that you are applying to. Your graphic can then be taken over the vehicle, keeping it taut, and avoiding fabrics, clothing otherwise dust and fluff can be attracted to the static of the vinyl.

Position the wet graphics gently on the panel, using a tape measure, or pre- appointed removable marked layout marks, and using an application squeegee, work out the soapy water from behind your graphic, Working from the centre outwards, press down the vinyl pushing the water/air out towards the edges.

Allow adhesion to take hold. If there are any air bubbles, use a Sharp Knife to carefully pop the bubbles and push the air out, once this is done just trim around any areas that need trimming to your required shape.

You are advised to thoroughly check all measurements of the vehicle and materials before any application work is carried out.

You assume the entire risk of using the materials. The images on licensed software have been produced from technical information supplied by the manufacturer. Whilst the utmost care has been taken during creation to ensure accurate measurements the manufacturer and distributor accept no responsibility for loss of time, money or materials due to inaccuracies.

If you do not accept the terms of this agreement as listed above, promptly return the package along with the written materials to the supplier.

If this kit is returned with components missing or damaged due to misuse, then charges may still apply, this will be down to the discretion of the supplier.
